

MASCOT® SAFE

- Safe workwear for all
- One of the largest ranges of high visibility workwear in the industry
- Certified workwear to make you stand out
- Many products have dirt resistant Teflon® finish
- For those who want to be seen

Top digit: Indicates products overall class, depending on the area of the fluorescent fabric and the area of reflective tape

Bottom digit: Indicates reflective strips ability to reflect light. There are two classes; 1 or 2, where 2 is the highest. All Mascot reflective strips are Class 2.

EN471

EN471 is the European Norm for High visibility Warning Clothing for professional use. The MASCOT® Safe range is certified to EN471. High visibility safety workwear is divided into three safety classes according to the degree of protection offered by the garments. Each classification reflects how well the garment provides protection for the wearer. The fluorescent fabric provides protection in the light and twilight hours and the reflective strips protect in the dark.

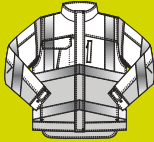

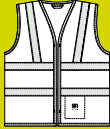

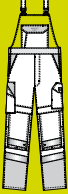

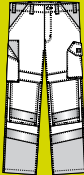

MASCOT® Loreto Pilot Jacket 09335-880
 Mascotex® - 100% polyester

- 240 g/m²
- 5 in 1 jacket that can be adapted to the situation - includes both shell jacket, shell gilet, quilted jacket and quilted gilet

CLASSIFICATIONS

High-visibility workwear is classified according to the surface area covered by the high visibility material and reflector. There are 3 classes, with class 3 being the highest giving you the maximum protection.

Class 3 workwear must be worn by everyone working on roads with normal speed restrictions, near railways and under cranes. It must also be worn by members of the emergency services. As a general rule, a set of workwear always constitutes class 3 workwear. A typical combination is trousers and jacket. However, a combination of shorts and traffic waistcoats also comply with class 3 standards. A boilersuit by itself is classified as class 3. Parka coats and jackets (size XS and up) that are worn separately also comply with class 3 standards.

Class 2 workwear must be worn by supervisors working in areas where class 3 workwear is required. Class 2

workwear typically consists of a traffic waistcoat, bib & brace or a T-shirt.

Class 1 typically consists of trousers and must be worn by visitors to areas where class 2 or class 3 workwear is required. Visitors must be accompanied by the people working in the area.

RESPONSIBILITY

The law stipulates that the employer is responsible for ensuring that adequate protective workwear is available for everyone's disposal in the workplace while the employee is personally responsible for its proper use.

To ensure proper use of your high visibility workwear the jacket must be zipped to ensure that the reflective tape is not visibly broken and the reflective tapes on the legs must not be covered by the boots.

MASCOT® Espinho Trousers 09079-860

Teflon® - 65% polyester/35% cotton

290 g/m²

- Teflon® finish makes the product dirt resistant and ensures high visibility when working in traffic
- New design of ruler pocket which is suitable for both short and long rulers
- Adjustable knee pockets with flap so dirt does not get in
- Leg length 32" & 35" | Size: C 44-C 66

TEFLON®

MASCOT takes your safety seriously and that is why we go even further to ensure your high visibility workwear stays more visible for longer. MASCOT uses Teflon® fabric protector on its high visibility clothing to keep it looking newer for longer (not winterwear). Teflon® fabric protector repels most water and oil-based liquids. You will never know it is there until you need it! Teflon® fabric protector bonds to each fibre to resist stains without affecting the fabrics look or feel. The more dirt repelling your garment is, the more visible it will be. With Teflon® fabric protector your garment will retain its qualities for a maximum of 75 domestic washes or 50 industrial washes.

Teflon® is a registered trademark of DuPont™
